

# DeepLook Forecast: 2018-8-17

Little Valley / Southwest Cattaraugus County, NY  
Jeremy Fuller, Meteorologist

Friday 17	Saturday 18	Sunday 19	Monday 20	Tuesday 21	Wednesday 22	Thursday 23
						
<b>75</b>	62 \ 70	55 \ 72	58 \ 75	58 \ 70	62 \ 68	48 \ 70
24	25	26	27-30		31-September 6	
			Hot but most likely dry		Some cooling possible	
55 \ 75	52 \ 78	62 \ 78				

## Forecast Discussion:

This week's weather will, for the most part, be the first experience with cooler weather as we ever-so-slowly approach autumn. High temperatures for this coming week will hover in the low 70s. Once the current scattered rain showers finally exit Saturday morning, the area will be under the influence of high pressure, and as a result, dry conditions and some sunshine will prevail from Saturday afternoon through late Tuesday. There is some heavy, soaking rain in the forecast for Wednesday, accompanied by some briefly cooler temperatures, with highs that day staying in the 60s and the next morning's low temperature in the upper 40s. That will largely only be temporary; by next weekend... and I'm almost a little hesitant to put this in the forecast, because the past couple of weeks, certain models have tried painting in hot weather in the 8-10 day ranges that haven't materialized, but most of the models and the historic analogs are in agreement that hot weather, or at least above-average warmth with dry air, is probable for the end of August. As for August 25, the thunderstorm icon I put in there is by no means a certainty, as the models don't quite agree on the pattern, and some (ahem, Canada) are showing rain and possible thunderstorms while others are showing perfectly dry and sunny skies. Some experimental models are also raising possibility of pop-up showers during the last week of August, which, given the heat, is not out of the question this far out.

Autumn may be coming, but it's coming slowly and it's not here yet.

## Normals and Almanac: August 17-26

High temperature: 77...76 — Low temperature: 54...53  
Sunrise: 6:25—6:34<sup>a.m.</sup> — Sunset: 8:13—7:59<sup>p.m.</sup> — Daylight: 13<sup>hr</sup>:48<sup>min</sup>—13<sup>hr</sup>:25<sup>min</sup> (-2.6<sup>min</sup>/<sub>day</sub>)
